5 KEY FACTORS TO UNDERSTAND WHEN SELECTING A CLOUD VOICE PROVIDER

*Leader in Unified Communications
Educates Customers on Importance of
Choosing the Right Cloud Voice
Solution for Your Business*

LIVONIA, MI – August 31, 2014 - Technology Solutions, a leader in unified communications, announced today that the company has collected and documented the five telltale signs to look out for when selecting a cloud voice provider. With the appeal of enhanced office productivity and increased profitability, it's no surprise that this technology has taken off. As the benefits of cloud voice continue to stack up, many small and mid-sized businesses are wondering how to choose the right solution. Technology Solutions outlines the five most important aspects to consider when evaluating cloud voice.

Strong, Local Presence in the Business Community: Even before you consider the solution selecting the right company to install and service cloud technology is the first step. One of the most important factors to look for is a technology company that operates in the same area that you do. They have a foundational understanding of the market that you are in, they understand the culture, and can administer customer service very quickly. When your partner has a presence in your community you can instantly make changes and

interact directly in case any issues ever come up. Inexperienced remote providers can often hide in the Internet abyss, so they don't have to deal with installation problems. Focus on finding a partner that is always willing to meet face-to-face and generate solutions to problems as they arise.

Understand the 3 Critical Factors to Successful Installation: Businesses need to make sure that they are working with a technology company who is well educated in the technical side of a transaction. The 3 most important factors are Quality of Service, a Proper Router and POE Switches. Installing a communications system without paying attention to these aspects can instantly jeopardize performance and call clarity. This is where inexperienced companies cause the infamous jitter, latency and lack of redundancy that annoy many of today's users. When an inexperienced provider sells a boxed, "plug and play" solution, the system usually will not work properly. Without properly assessing the network and reorganizing it so everything is streamlined, users experience a messy network with lots of dropped calls in the short-term, and expensive re-installs in the long-term. More experienced providers understand the complexity and can

actually streamline this intricate web of information to deliver better performing cloud voice technology and in some cases, reduce turn their phone system into a profit center.

Offering a Premium/Low-Price Model. The problem here is that low-cost solutions usually do nothing for the business in the long-term, as they lack scalability. Business owners are usually prone to purchasing barebones systems, but in the long-term these end up being much more expensive, due to the shoddy foundation that low-price systems usually offer. As the business starts to scale, more features become necessary and communication infrastructure grows in complexity. Usually the low-price solutions are limited in their functionality, which means that as the business grows and demands more from their communications infrastructure, they won't be able to get this functionality. Simply put, these limitations usually lead to patchwork solutions that can't stand the test of time. Look for providers who assess your business needs in the long-term and refuse to take the quick cash to eventually leave you with a magnified problem later.

Negotiation Power with the Carrier. Some of the best features of phone systems require successful integration with telecommunication

carriers. Local providers have the ability to port numbers, allocate proper bandwidth and probe the network to determine whether the carrier can support the bandwidth demands you will be placing on them. This is another reason why only local providers are best suited for business interactions.

Long-Term Contracts. Plainly put, only deal with companies that don't require long-term contracts. The fundamental reality of a long-term contract is that it favors an underperforming provider. This misaligns incentives and shifts the transaction in favor of the provider rather than the needs of the customer. Deal with a company that has enough faith in their ability to serve their customers so well that they propose a month-to-month, cancel-anytime agreement. This will eliminate a lot of providers from the equation but does wonders to ensure that your provider's

incentives are aligned with your best interests. Most companies that get caught in those contracts find that they are virtually unbreakable. If you see a long-term contract, run.

By focusing on these criteria, businesses can ensure that they are working with only the best providers, who will leave them with a more powerful, robust and efficient network to run their business.

ABOUT TECHNOLOGY SOLUTIONS, LLC

Technology Solutions, L.L.C. is a leading provider of voice and data networking equipment and services for businesses within Michigan and across America.

Technology Solutions offers state-of-the-art technology to help its customers increase profitability, reduce communication costs, and

give them a competitive advantage in their marketplace.

The company has quickly expanded to provide complete converged solutions incorporating voice systems, data systems, and structured cabling needs, saving customers significant time and cost, and enabling them to leverage their IT investment for future growth. From a consultative approach, Technology Solutions designs, implements, and monitors end-to-end solutions.

With over 70 years of experience, the professionals at Technology Solutions are committed to the philosophy of providing best in class technology, with personal and customized service and support.

For more information regarding Technology Solutions, call (734) 542-6929 or visit www.ts-llc.com.
